

Response to RFP: BrightPath Tech

AI-Assisted Tier 2/3 Application Management & Service Desk Platform

Executive Summary

BrightPath Tech is excited to propose a fast, cost-effective AI-assisted service desk solution for Meridian. We believe speed to value matters, and our proposal is built to get Meridian live quickly at a price point well below typical market rates for platforms of this kind.

Proposed Solution & Implementation Approach

BrightPath will deploy our existing SaaS ticketing product with an AI-powered auto-categorisation add-on. Tickets are automatically classified and routed using a pre-trained model; the model is not fine-tuned per client but performs well across most standard IT ticket types out of the box. Integration with ServiceNow will be handled via our standard connector. We have not load-tested the platform at the specific 3x seasonal spike volume Meridian describes, but our SaaS infrastructure auto-scales and we do not anticipate issues.

Timeline, Team Structure & Milestones

BrightPath proposes a 45-day transition, the fastest of any likely bidder: Days 1-10 setup and configuration; Days 11-30 integration and testing; Days 31-45 go-live. The team consists of a Project Lead and 4 support engineers who will also handle steady-state operations, supplemented by our shared 24x5 support pool for after-hours coverage (weekend coverage is best-effort, not staffed).

Price Table & Assumptions

Year 1 transition/setup cost: USD 65,000. Year 1 steady-state run cost: USD 42,000 per month, flat for Year 2. Assumptions: baseline ticket volume of 9,000 per month; all change requests included regardless of size; pricing in USD.

Security, Compliance & Risk Controls

BrightPath takes security seriously and follows industry best practices for access control and data protection. Our platform uses encryption and role-based access. We are in the process of pursuing SOC 2 certification and expect to complete this within the next 12-18 months.

Support Model, Experience & References

BrightPath has successfully delivered ticketing platform rollouts for several small and mid-size clients. This would be our largest engagement to date in terms of application portfolio size. We are confident in our ability to scale our support model to meet Meridian's needs and would welcome the opportunity to prove ourselves on an engagement of this scale.
