

Response to RFP: NexaWorks

AI-Assisted Tier 2/3 Application Management & Service Desk Platform

Executive Summary

NexaWorks proposes a balanced, well-governed platform for Meridian's AI-assisted application management and service desk requirement, combining a proven implementation methodology with a support model purpose-built for multinational, follow-the-sun operations.

Proposed Solution & Implementation Approach

NexaWorks' platform uses a hybrid triage model: an AI classification layer handles routine categorisation with a documented 92% historical accuracy across comparable deployments, while a confidence-threshold gate routes low-confidence tickets to a human triage queue rather than guessing. ServiceNow integration is delivered through REST APIs with a dedicated middleware layer that supports bidirectional sync and custom field mapping specific to Meridian's ITSM configuration. The platform has been validated at 3.5x baseline load in a prior deployment of comparable scale, and includes an automated rollback to manual triage if misclassification exceeds a configurable threshold.

Timeline, Team Structure & Milestones

NexaWorks commits to the RFP's 90-day transition window: Days 1-15 discovery and access provisioning; Days 16-50 build, integration, and knowledge transfer from the incumbent (with named handover checkpoints); Days 51-75 shadow-running with defined go/no-go criteria at each application group; Days 76-90 phased cutover with a two-week hypercare period. The team includes a dedicated Transition Director, a Solution Architect, 4 integration engineers, and a steady-state team of 22 support engineers across Manila, Warsaw, and Bengaluru hubs, each with a named regional lead and documented escalation matrix reviewed monthly with Meridian's service owner.

Price Table & Assumptions

Year 1 transition/setup cost: USD 310,000. Year 1 steady-state run cost: USD 78,000 per month. Year 2 steady-state run cost: USD 74,000 per month. Assumptions: baseline ticket volume of 9,000 per month; seasonal spikes up to 3x included; standard change requests under 3 hours included, above this billed at USD 130/hour; pricing in USD with a capped 2.5% annual indexation from Year 3, and a service-credit regime of up to 8% of monthly fees for missed SLAs.

Security, Compliance & Risk Controls

NexaWorks is ISO 27001:2022 certified and undergoes an annual SOC 2 Type II audit, with the most recent report available under NDA. All production access requires MFA and is logged centrally with 365-day retention. Personnel with production access are background-checked prior to onboarding, and data residency is contractually restricted to Meridian's approved jurisdictions. NexaWorks commits to a 2-hour initial response SLA for Severity 1 security incidents and a documented quarterly access-review cycle.

Support Model, Experience & References

NexaWorks operates a true follow-the-sun model with formal shift handover documentation between Manila, Warsaw, and Bengaluru, a defined L1-L2-L3 escalation matrix, and a named Service Delivery Manager as single point of accountability. NexaWorks has delivered three comparable engagements in the past five years, including a 50-application portfolio for a global manufacturing client and a 35-application portfolio for a logistics group, both of which remain active references and can be contacted directly.
