

Response to RFP: Orbit Digital

AI-Assisted Tier 2/3 Application Management & Service Desk Platform

Executive Summary

As Meridian's current supplier for application support services, Orbit Digital understands this environment better than any competing bidder. We propose extending and modernising our existing engagement to add the AI-assisted triage and self-service capabilities described in the RFP, building directly on the operational knowledge and relationships we have already established over the past three years.

Proposed Solution & Implementation Approach

Orbit Digital will introduce an AI-assisted triage module into our existing service desk platform. The module will classify and route tickets using machine learning. Integration with ServiceNow will build on our current connection, extended to support the new AI components. We are confident this can be delivered with minimal disruption given our existing footprint in Meridian's environment. Further technical details on the specific confidence-thresholding approach and load-testing results will be provided during solutioning workshops post-award.

Timeline, Team Structure & Milestones

Because Orbit Digital is already operating within Meridian's environment, we propose a 60-day transition focused on adding the new AI capabilities rather than a full platform migration: Days 1-20 requirements refinement and design; Days 21-50 build and testing; Days 51-60 go-live. The existing support team of 15 engineers, already familiar with Meridian's applications, will be augmented with 3 additional engineers for the AI triage capability. Team structure and named leads for the augmented team will be confirmed at kickoff.

Price Table & Assumptions

Year 1 transition/setup cost: USD 190,000 (reflecting reduced discovery effort given existing environment knowledge). Year 1 steady-state run cost: USD 82,000 per month (an increase of USD 9,000 per month over our current contract, reflecting the added AI capability). Year 2 steady-state run cost: USD 82,000 per month, held flat. Assumptions: baseline ticket volume of 9,000 per month, consistent with current run-rate; change request handling continues under existing contract terms.

Security, Compliance & Risk Controls

Orbit Digital maintains ISO 27001 certification and has operated within Meridian's security requirements for the past three years without a reportable data incident. All production access follows Meridian's existing approved access process. SOC 2 Type II audit is scheduled for later this year; the most recent completed audit is SOC 2 Type I, conducted 18 months ago.

Support Model, Experience & References

Orbit Digital's current performance under the existing contract includes two Severity 1 incidents in the past 12 months where the SLA-committed response time was missed (both related to after-hours escalation gaps, which have since been addressed with a revised on-call rota). Overall service satisfaction from Meridian's service owner has been rated as adequate. As the incumbent, Orbit Digital's most relevant reference is Meridian itself; we can also provide one external reference from a comparable financial services client of similar portfolio size.
