

Response to RFP: Keystone Digital

AI-Assisted Tier 2/3 Application Management & Service Desk Platform

Executive Summary

Keystone Digital is a mid-market managed services provider proposing a dependable, conventional AI-assisted triage capability for Meridian's service desk. Our approach favours proven components over novel architecture, prioritising predictable delivery over experimentation.

Proposed Solution & Implementation Approach

Keystone's platform combines rule-based routing with a supervised classification model for ticket categorisation, integrated with ServiceNow via our standard REST connector. The platform has been validated at the RFP's required 3x seasonal spike volume in a prior client deployment, though we have not tested beyond that threshold. Misclassified tickets fall back to a manual triage queue reviewed each business-hour cycle.

Timeline, Team Structure & Milestones

Keystone proposes a 95-day transition: Days 1-20 discovery; Days 21-65 build and integration; Days 66-85 shadow-running; Days 86-95 cutover. This is slightly beyond the RFP's 90-day target, which we believe is a reasonable trade-off for a lower-risk, conventional build. The team includes a Transition Lead, 2 integration engineers, and a 16-engineer steady-state support team across two regional hubs (Dublin and Manila).

Price Table & Assumptions

Year 1 transition/setup cost: USD 260,000. Year 1 steady-state run cost: USD 80,000 per month, rising to USD 82,000 in Year 2. Assumptions: baseline ticket volume of 9,000 per month; standard change requests under 4 hours included; pricing in USD.

Security, Compliance & Risk Controls

Keystone is ISO 27001:2022 certified and completes an annual SOC 2 Type II audit. Production access requires MFA and is logged centrally with 180-day retention. All personnel with production access are background-checked, and data processing is restricted to Meridian's approved jurisdictions.

Support Model, Experience & References

Keystone operates a two-hub follow-the-sun model (Dublin, Manila) with a documented L1-L2 escalation path. We have delivered two comparable service desk modernisation engagements in the past six years and can provide one contactable reference of similar portfolio size.
