

Response to RFP: Solstice Technologies

AI-Assisted Tier 2/3 Application Management & Service Desk Platform

Executive Summary

Solstice Technologies proposes a dependable AI-assisted triage capability for Meridian's service desk, drawing on our experience modernising ITSM environments for mid-size enterprise clients.

Proposed Solution & Implementation Approach

Solstice's platform uses a classification model integrated with ServiceNow via a custom middleware layer supporting bidirectional sync. The platform has been validated at the RFP's required 3x seasonal spike volume in a comparable prior deployment. Misclassified tickets are routed to a manual review queue.

Timeline, Team Structure & Milestones

Solstice proposes a 95-day transition: Days 1-20 discovery; Days 21-65 build and integration; Days 66-85 shadow-running; Days 86-95 cutover. The team includes a Transition Manager, 2 integration engineers, and a 14-engineer steady-state support team across Warsaw and Manila hubs.

Price Table & Assumptions

Year 1 transition/setup cost: USD 255,000. Year 1 steady-state run cost: USD 81,000 per month, held flat into Year 2. Assumptions: baseline ticket volume of 9,000 per month; standard change requests under 4 hours included; pricing in USD.

Security, Compliance & Risk Controls

Solstice is ISO 27001:2022 certified and completes an annual SOC 2 Type II audit. Production access requires MFA and is logged centrally with 180-day retention. Personnel with production access are background-checked, and data processing is restricted to Meridian's approved jurisdictions.

Support Model, Experience & References

Solstice operates a two-hub follow-the-sun model (Warsaw, Manila) with a documented escalation path. We have delivered two comparable engagements in the past five years and can provide one contactable reference of similar portfolio size.
